

SALT + DE-ICER

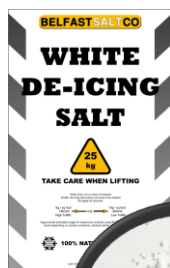

White Marine Salt

Our white marine salt is imported from Europe. It is a high quality, fine-grade salt.

It is **cleaner** than the brown salt as it **does not contain the same grit** as the brown salt and so does not stain the snow or create the same dirt associated with rock salt grit.

Our Marine Salt is finer than rock salt with higher moisture so is faster acting and better spreading but not suitable for mechanical spreaders

Supplied in 25kg bags, 1 ton pallets of 40x25kg bags,

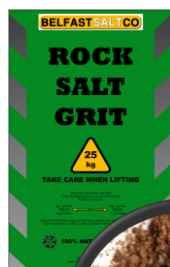

White Rock Salt

Our white salt is an imported European salt.

It is **cleaner** than the brown salt as it **does not contain the same grit** as the brown salt and so does not stain the snow or create the same dirt associated with rock salt grit.

Our White Rock Salt is coarser than the White Marine Salt and is suitable for mechanical spreaders and hand spreading.

Supplied in 25kg bags, 1 ton pallets of 40x25kg bags, bulk bags & loose

Brown Rock Salt Grit

Locally mined Rock Salt Grit contains an inherent 'marl' which is the rock from which the salt is cut. This provides extra grip under foot and for vehicles but is a lot messier than the white salt.

Suitable for mechanical spreaders and hand spreading.

Supplied in 25kg bags, 1 ton pallets of 40x25kg bags, bulk bags & loose

SALT + DE-ICER

exoTHAW 'Non-Salt' De-Icer

- This WHITE de-icer is a Calcium Chloride formulation.
- **Kinder to concrete, metals, plants and animals**
- Fastest acting – **works as low as -25°C**
- It is **exothermic** – its reaction with moisture creates heat and aids melting
- It is **hygroscopic** – meaning it creates moisture, aiding melting
- **Supplied in 25 kg bags or 6kg tubs with handle**
- Must be stored in sealed container in a dry location
